Kyle W. **Rader**

Member of Technical Staff · Developer Tooling & AI Systems

kylewrader@gmail.com | /kyle-rader | /in/kylewrader

Skills

Languages	Rust; language selection based on task requirements
AI Engineering	Prompt design, MCP design, agent loop engineering, agent, skill, and plugin design, command-line tooling
Developer Tools	Git, Docker, Azure DevOps, GitHub

Experience

Member of Technical Staff — Agency CLI (AI Coding Agents) · Microsoft *Remote*

March 2025 - Present · 1 yr 7 mos

Building the AI engineering platform that integrates Microsoft's internal systems with GitHub Copilot at enterprise scale.

- Lead engineer on the **Agency CLI**, part of **Agency**, Microsoft's third-most-used internal software platform, which runs GitHub Copilot at scale across 100,000+ engineers and CI/CD pipelines.
- Designed token-efficient PR completion tooling that lets agents monitor pull requests for automated feedback, reducing token use by 50–75% in long-running sessions.
- Developed an **Agency support skill and tool** that grounds Copilot-assisted support in platform source code and documentation, scaling support for a company-wide tool maintained by a team of fewer than 30.
- Defined CLI standards for configuration, command consistency, and type-safe interfaces; drove CI/CD and distribution for Agency CLI, reaching 100,000+ engineers.
- Actively partner with the GitHub Copilot CLI team, contributing changes directly to Copilot CLI to better support enterprise use cases.
- Built an MCP proxy layer in Agency CLI that handles Microsoft Entra ID authentication, enabling internal MCP servers to work out of the box with Claude Code, GitHub Copilot, and other MCP-compatible clients.

Principal Software Engineer — Azure Hardware & Infrastructure · Microsoft *Remote*

June 2024 - March 2025 · 10 mos

Embedded systems SDK work for next-generation Azure hardware infrastructure.

- Built an async **Rust SDK** for Azure developers to interface with a custom operating system running on new Microsoft-designed data center chips, enabling hardware-level control from idiomatic Rust.

Principal Software Engineer — Office DevPlat · Microsoft *Remote*

December 2022 - June 2024 · 1 yr 7 mos

Designed CLI platforms and tooling abstractions empowering developers building foundational Microsoft products (Word, Excel, PowerPoint).

- Designed and built **autolinter** — a generic Rust-based linter toolkit that automatically applies lint fixes to pull requests in Azure DevOps, used across Office engineering.
- Built **azureauth** — a general-purpose Microsoft Entra ID authentication CLI used by **10,000+ developers daily**, providing a seamless authentication experience for internal developers.
- Created **lasso** — a C# CLI framework providing logging, UX, and telemetry out of the box; adopted across the team's entire suite of developer tools.
- Championed Rust adoption for developer tooling within Office Engineering: defined best practices, reviewed implementations, and grew the internal Rust practitioner community.

Senior Software Engineer — Office DevPlat · Microsoft *Redmond, WA*

May 2018 - December 2022 · 4 yrs 7 mos

Developer experience engineering for the Office organization's global engineering system.

- Built and operated engineering systems used by thousands of developers worldwide to build and ship Microsoft Office.
- Developed an EditorConfig-based line-ending linter for the 180GB Office monorepo, catching 3–5% of PRs with encoding issues before merge.
- Built Azure Pipelines branch protection policies safeguarding Office's branching schema for 5,000+ engineers, preventing catastrophic pushes before merge.
- Co-founded the Experiences & Devices GLEAM sub-chapter; organized Fix-Hack-Learn engineering events three times per year.

Software Engineer · ActionSprout *Bellingham, WA*

July 2016 - March 2018 · 1 yr 9 mos

Tools and training to help nonprofits exceed their goals on Facebook.

- Architected web microservices, recommendation systems, and business intelligence pipelines for a nonprofit social media platform.
- Standardized Docker and Docker Compose to improve developer environment consistency across the team.
- Built a Facebook Graph API RubyGem, Rails micro-service generator, and JWT authentication standards used daily in production.

Software Development Life Cycle Manager · 8las Inc *Bellingham, WA*

July 2015 - July 2016 · 1 yr 1 mo

Augmented reality startup.

- Established agile processes, codebase organization, and version control standards to streamline development velocity for an early-stage AR startup.
- Ran augmented reality demos and pitched the product to investors in Seattle and California.

Production Engineer · WompMobile *Bellingham, WA*

March 2015 - August 2015 · 6 mos

Mobile web platform converting desktop sites to mobile.

- Front-end developer converting desktop websites to mobile-optimized experiences using HTML, CSS, and JavaScript.

Web Developer · Logos Bible Software *Bellingham, WA*

June 2013 - January 2014 · 8 mos

Bible study software and publishing company.

- Developed internal web services tools on the DevOps team; built an open-source generic tile-based web page using Ruby on Rails.

Projects

Kitchen Table Games · Founder & Lead Engineer *https://kitchentable.games*

2026 - Present

Real-time multiplayer puzzle games platform built under Automata Software LLC.

- Building a privacy-first, real-time multiplayer games platform under Automata Software LLC — no ads, no data selling, no third-party tracking.
- Built a full-stack Rust application with real-time state synchronization for original multiplayer word- and number-based puzzle games, supporting 1–20 players per table.

The Great Puzzle Hunt · Lead Engineer & Co-Founder *https://greatpuzzlehunt.com*

2015 - 2018

Annual puzzle hunt at Western Washington University drawing ~500 participants competing on a real-time game platform.

- Full-stack web platform handling registration, team formation, payment webhooks, real-time scoring, volunteer QR scanning, and administration — serving ~500 participants annually.
- Built the initial platform in React/Node.js; it has supported annual events for 10 years.

Education

Western Washington University · B.S. Computer Science *Bellingham, WA*

2010 - 2014

- Computer Science Dept. Citizenship Award & Scholarship
- Technology Leader of Tomorrow — Technology Alliance Group NW (TAGNW)
- Robotics Club President, IEEE Vice President, ACM Activities Coordinator & Mentor

Western Washington University · M.S. Computer Science (Coursework completed) *Bellingham, WA*

2014 - 2018

- Completed all required coursework before leaving the program without defending the thesis.
- Founded *Out in Science* — a WWU graduate community for LGBTQ+ students in STEM.
